

Business Objects Training – Private Courses

Semi-Customised & Bespoke Options

We offer 2 additional levels of Service for tailoring the 2 Day private courses to your requirements;

A Semi-customised option proves popular with clients. This is ideal for delegates requiring hands-on experience with their own data, applying what they have learnt on the course in a real situation before returning to their place of work. This option reinforces the standard training lessons at a reasonable cost. At an extra cost of £960, an afternoon workshop is created by the trainer working onsite with you before the training, and in consultation with your nominated contact produces hands-on exercises for delegates for the second afternoon.

Other clients require a **fully bespoke option**, where all references to standard data are removed from the courseware, replaced with the client's own data and screenshots. Workshop on client's data included as per semi-customised option. The fully bespoke service is ideal where repeat training is envisaged over an extended period, eg to support new systems introduction, large system rollouts, or there is a regular training requirement for new staff members etc. The extra cost of a fully bespoke option is £2460 and will generally involve 1 or 2 onsite visits by the trainer.

If you should require a particular customisation option not mentioned above, please contact us at training@daylightresources.co.uk with your requirements and we will do our best to oblige.
